KLH INDUSTRIES, INC. CONTINUES TO DEVELOP LEAN MEASUREMENTS

Germantown, WI - October, 2008 - KLH Industries, Inc. continues employee training of Lean manufacturing concepts this week to further advance processes and ideology amongst one of southeastern Wisconsin's leading tool and manufacturing establishments. KLH Industries continues to demonstrate to their customers the assurance that they are receiving projects in a manner that exceeds their expectations and that is being done in the most cost effective way possible.

When asked about his thoughts concerning Lean processing, KLH Industries, Inc. CEO, Ken Heins replied "It was not until I attended a "Lean Manufacturing" class sponsored by MSOE in 2004 that I began to connect dots and realize that being a student of work flow was a good thing. I became so inspired by the "Lean" philosophy that I wanted everyone at KLH to have the opportunity to learn and practice this newfound wisdom". He continues, "I want Lean training to connect the dots for everyone else the way it has for me so we all have the best chance as individuals, a company and an industry to be competitive in a world economy. I want everyone at KLH to see what I see and voluntarily buy-in to the need to change, eliminating the waste and believe in valued growth through customer inspired learning and innovation".

KLH Industries' loyal customers expect reliable delivery of high-value products and services. By introducing even more Lean methods to their processes, KLH intends to further eliminate non-essential steps that waste time and money. By combining and integrating Lean principals that improve speed/flow, the results will be very beneficial to KLH Industries customers.

ABOUT KLH

KLH Industries has been on the cutting edge of tool/part manufacturing for over 21 years and are ISO 9001-2000 registered. They have applications ranging from aerospace, defense, medical, electronics and food processing along with machining capabilities including EDM (Wire & Sinker), Waterjet and CNC. With their dedicated staff of project managers, KLH Industries is sure to exceed expectations for any need along the manufacturing process.
